

## ATTACHMENT C

### Clean Replacement/New Claims (entire set of pending claims)

*Following herewith is a clean copy of the entire set of pending claims.*

---

- B12
1. (twice amended) A working enclosure, comprising:  
a vessel having at least one enclosing structure defining on an inside of said enclosing structure a working chamber, and  
a motor with a rotating magnetic field comprising
    - (a) a stator located outside of the working chamber, and
    - (b) a rotor made to rotate by the rotating magnetic field, the rotor being part of a propeller, said propeller being located inside of the working chamber and rotating about a geometrical axis of rotation as said rotor is rotated by the rotating magnetic field to thus move an atmosphere of the working chamber.
  2. (twice amended) An enclosure as claimed in to Claim 1, wherein the propeller comprises blades having upper surfaces which are inclined at least partially with respect to its axis of rotation in order to produce a local partial vacuum above the propeller, tending to lift said propeller.
  3. (twice amended) An enclosure as claimed in Claim 1, further comprising means for indexing a position of the propeller with respect to a support surface located in the working chamber.
  4. (twice amended) An enclosure as claimed in claim 1, wherein the propeller rests on a support surface located in the working chamber.
  5. (twice amended) An enclosure as claimed in Claim 4, wherein the propeller rests freely on said support surface located in the working chamber.

B12  
Amended

6. (twice amended) An enclosure as claimed in Claim 5, wherein the propeller rests directly on a bottom wall of the enclosing structure which bottom wall provides said support surface.

7. (twice amended) An enclosure as claimed in Claim 4, further comprising at least one shelf located in the working chamber, the shelf comprising a lower wall and an upper wall between which said walls the propeller is housed, and wherein the lower wall provides said support surface.

8. (twice amended) An enclosure as claimed in Claim 7, wherein the shelf rests freely on at least one shelf support located in the working chamber.

9. (twice amended) A working enclosure as claimed in claim 1, further comprising a heating means for heating the atmosphere of the working chamber.

10. (twice amended) A working enclosure as claimed in claim 1, further comprising a heat exchanging means for changing a temperature of the atmosphere of the working chamber.

11. (twice amended) An enclosure as claimed in claim 1, wherein the stator produces the rotating magnetic field.

12. (twice amended) An enclosure as claimed in claim 1, wherein the rotor comprises at least one permanent magnet.
